2020: The revised Z-Score was 2.66 (previously 3.01). Since 2.66 is between 1.81 and 2.99, the company was in the Grey Zone (Moderate Risk). This was due to the weakness in Working Capital (which negatively affected X1) that year.

2022-2023: In these two years, the company was at its highest safety levels (5.45 and 6.41), primarily due to the significant increase in Market Capitalization (which boosted X4 to 6.40 and 7.99, respectively).

2024: Due to a decrease in Market Value of Equity, the Z-Score dropped back to 4.02. However, it remains in the safe zone.

Recommendation: HOLD / SELL
Initial Recommendation: SELL (Sell) or STRONG HOLD (Strongly Hold)

Rationale:

- High P/E Ratio (30.67): The P/E ratio above 30 in 2024 is unusual, especially with the decline in Net Profit and EPS. This suggests that the market has extremely high expectations for the company's future earnings. If these expectations are not met, a significant price correction may occur.
- Weak Profitability (Decline in EPS): The EPS decreased from 1.40 in 2022 and 1.31 in 2023 to 0.89 in 2024, indicating a decline in the company's profitability.
- Stable EV/EBITDA: The EV/EBITDA ratio of 9.62 indicates a stable valuation, but due to the weakness in P/E and EPS, it poses a risk for investment.

Given the decline in EPS and the high P/E Ratio, the stock appears slightly overvalued now. Therefore, it is advisable to either sell or hold strongly while waiting for improvements in profitability.
